# **SERVICE MANUAL**

AEP Model E Model

### **SPECIFICATIONS**

TV system Channel coverage

Antenna Picture tube

Input Output CCIR (B, G)

VHF channels 2-12 UHF channels 21-68

VHF/UHF telescopic antenna 2-inch picture measured diagonally

EXT ANT: minijack, 75 ohms EAR: stereo minijack

impedance 8-300 ohms

Power requirement

6 V DC:

Four R6 or LR6 batteries

Insert into the battery compartment.

House current

E model: 110-240 V AC

Use the supplied AC

power adaptor.

AEP model: 220 V AC

Use the AC-D4 AC power adaptor (op-

tional).

Four R14 or LR14 batteries

Insert into the EBP-6 auxiliary battery

case (optional).

Car battery (12 V DC)

Use the DCC-127A car battery cord

(optional).

### Battery life

	Battery	Life (hrs.)
Battery	Sony New Super SUM-3 (NS)	approx. 1.5
compartment	Sony Eveready alkaline AM3	approx. 5
Battery	Sony New Super SUM-2 (NS)	approx. 6
case	Sony Eveready alkaline AM2	approx. 14

Power consumption 1.6 W (6 V DC)

Dimensions

Approx.  $64.3 \times 156.6 \times 41.5 \text{ mm (w/h/d)}$ 

 $(2^{5}/_{8} \times 6^{1}/_{4} \times 1^{11}/_{16} \text{ inches})$ 

incl. projecting parts and controls

Weight Approx. 410 g (14.5 oz) incl. batteries

### **FEATURES**

- Miniature black and white TV for portable or tabletop
- Auto Fine Tuning circuit enables precise tuning.
- Longer alkaline battery life provides approximately 5 hours of continuous enjoyment.
- 4-way power source capability allows use in any siluation.
- SOUND position enables listening to the TV audio only-
- External antenna input for superior reception inside the home or car.

### SAFETY-RELATED COMPONENT WARH ING!!

COMPONENTS IDENTIFIED BY SHADING AND MARK ⚠ ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OFERATION. REPLACE THESE COMPONENTS WITH SON Y PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

# FLAT BLACK AND WHITE TV SONY

### Replacing chip components

All chip components should be connected and disconnected, using a tapered soldering iron [temperature of the iron tip: less than 280°C (536°F)], a pair of tweezers and braided wire.

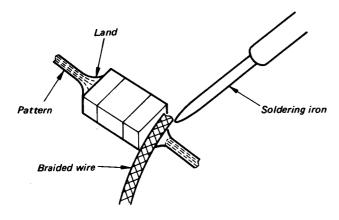

### Precautions for replacement

- Do not disconnect the chip component forcefully.
   Otherwise, the pattern may peel off.
- Never re-use a disconnected chip component. Dispose of all old chip components.
- 3. To protect the chip component, heating time for attaching the component should be within 3 seconds.

### O Removing chip components

### (1) Removing solder at electrode

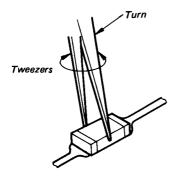

Remove the solder at the electrode, using a thin braided wire. Do not remove the solder of the part (chip component) attached adjacent to the electrode.

### (2) Disconnecting chip components

Turn the tweezers with the soldering iron alternately applied to both electrodes, and the chip component will be disconnected. Take careful precautions while disconnecting, because if the chip component is forcefully removed the land may peel off.

Never re-use a disconnected chip component.

### (3) Smoothing the soldered surface

After disconnecting the chip component, remove the solder by using a braided wire to smooth the land surface.

### O Connecting chip components

The value of chip components is not displayed on the main body. Take due precautions to avoid mixing new chip components with other ones.

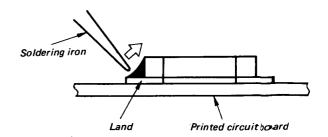

### (1) Applying solder to land on one side

Apply a thin layer of solder to the land on one side where the chip component is to be connected. Too much solder may cause bridging.

### (2) Speedy soldering

Hold the chip component at the desired position, using tweezers, and apply the soldering iron in the arrow-marked direction. To protect the chip component, heating time should be within 3 seconds.

(3) Speedy soldering of electrode on the other side Solder the electrode on the other side in the same way as in (2) above.

### Flexible Circuit Board Repairing

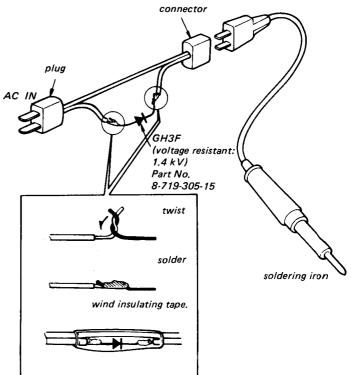

the circuit board.

- Keep the temperature of the soldering iron at 270° ± 10°C during repairing.
   You can maintain the temperature of the soldering iron around 270°C by using the ther-
- mal controller as illustrated on the right.Do not touch the soldering iron more than 4 seconds or 3 times on the same conductor of
- 3. Do not apply force on the conductor when soldering or unsoldering.

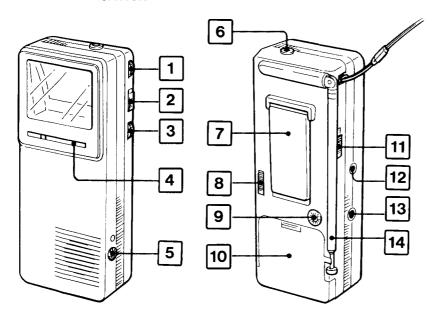

### To make thermal controller of soldering iron

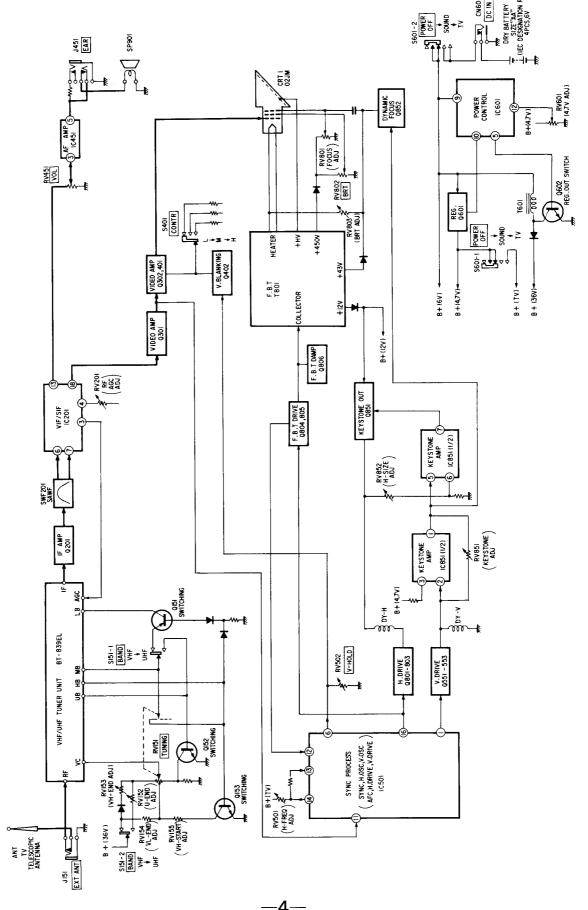

### PARTS IDENTIFICATION

- 1 VOL (volume) control
- 2 POWER switch
- 3 TUNING control
- 4 Dial scale
- 5 BRT (brightness) control
- 6 EXT ANT (external antenna) jack
- 7 Stand
- 8 BAND switch
- 9 V (vertical) HOLD control
- 10 Battery compartment
- 11 CONTR (contrast) switch
- 12 EAR (earphone) jack
- 13 DC IN 6V (external power input) jack
- 14 Telescopic antenna

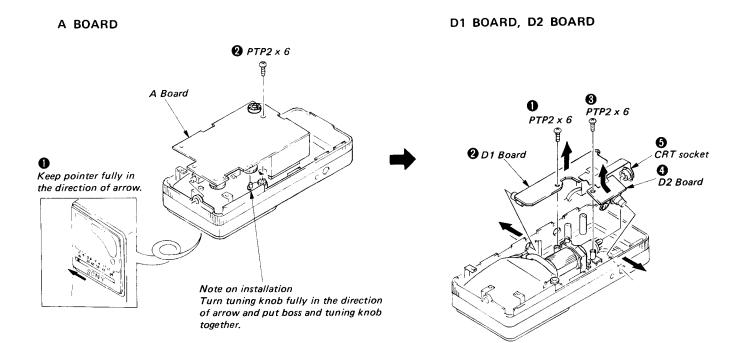

# **SECTION 1 BLOCK DIAGRAM**

# SECTION 2 DISASSEMBLY

Note: Follow the disassembly procedure in numerical order given.

# CABINET REAR Obstacry lid OPTP2 x 6 PTT2 x 8 OPTP2 x 6 PTT2 x 8 OPTP2 x 6 OPTP2 x

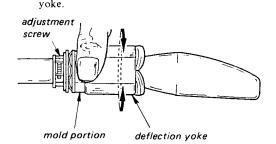

# SECTION 3 ADJUSTMENTS

- 1. Test Equipment Required
  - regulated power supply
  - color-bar/pattern generator
  - digital voltmeter
  - VTVM
- 2. Input Signal a cross-hatch, a color-bar or an off-air signal.
- 3. These adjustment should be performed with 6V dc unless otherwise noted.

### Horizontal Alignment Adjustment

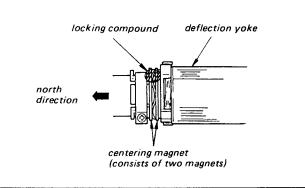

- 1. Loosen the adjustment screw.
- 2. Tune in an off-air signal and adjust deflection yoke for optimum picture.
- 3. Tighten the screw after the adjustment.

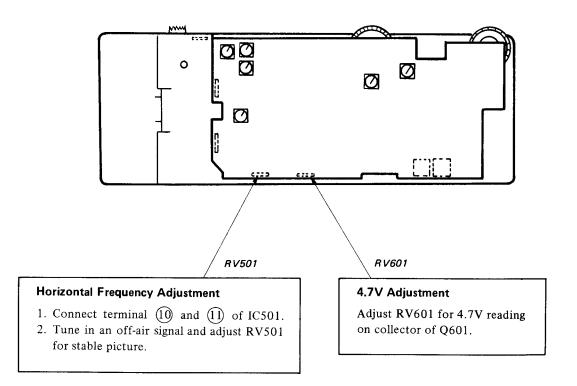

**Note:** When making the adjustment, turn the deflection yoke while holding the mold portion together with yoke.

### Centering Adjustment

- 1. Turn the socket of CRT toward the north.
- 2. Tune in an off-air signal.
- 3. Adjust the centering magnet so that the picture is in the center.

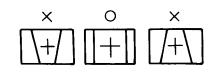

### Focus Adjustment

- 1. Set the regulated dc power supply voltage to 4.5V.
- 2. Adjust RV801 for the best focus at the center of the picture.

RV801

# **Keystone Correction (KEYST) Adjustment**

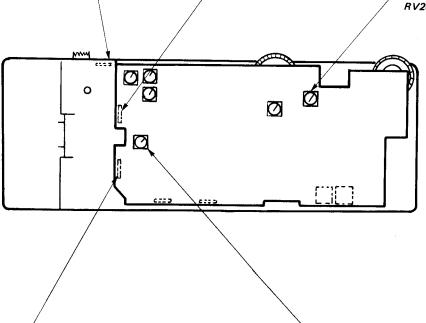

- 1. Tune in an off-air signal.
- 2. Adjust RV851 for optimum picture.

# RV851

- RF AGC Adjustment
- 1. Tune in an off-air signal.
- 2. Adjust RV201 so that snow noise disappears from the picture.

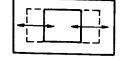

RV201

### Horizontal Amplitude (H-SIZE) Adjustment

RV852

- 1. Tune in an off-air signal.
- 2. Adjust RV852 for the best horizontal amplitude.

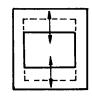

### Vertical Amplitude (V.SIZE) Adjustment

1. Tune in an off-air signal.

RV551

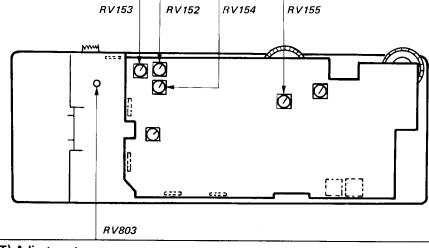

2. Adjust RV551 for the best vertical amplitude.

### **Channel Display Adjustment**

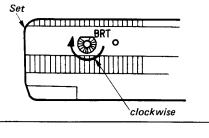

- 1. Set the BAND switch to VHF.
- 2. Turn the TUNING knob, set the dial pointer to the number "4" on dial scale.
- 3. Adjust RV154 for the best focus at the center of the picture.
- 4. Turn the TUNING knob, set the dial pointer to the number "5" on dial scale.
- 5. Adjust RV155 for the best focus at the center of the picture.
- 6. Set the dial pointer to the number "12" on dial
- 7. Adjust RV153 for the best focus at the center of the picture.

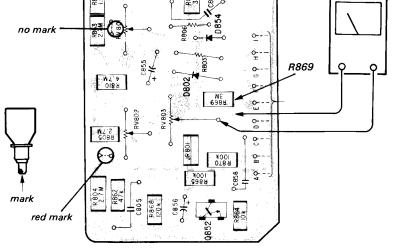

- 8. Tune in to an off-air signal of 7-11 ch and confirm that the pointer stands at specified channel.
- 9. Tune in to an off-air signal of 2 and 3 ch and confirm that the pointer stands at specified channel.
- 10. Set the BAND switch to UHF and set the dial pointer to the number "68" on dial scale.
- 11. Adjust RV152 for the best focus at the center of the picture.
- 12. Tune in to an off-air signal near 30 ch and confirm that the signal is tuned between  $30 \pm 3$  ch.

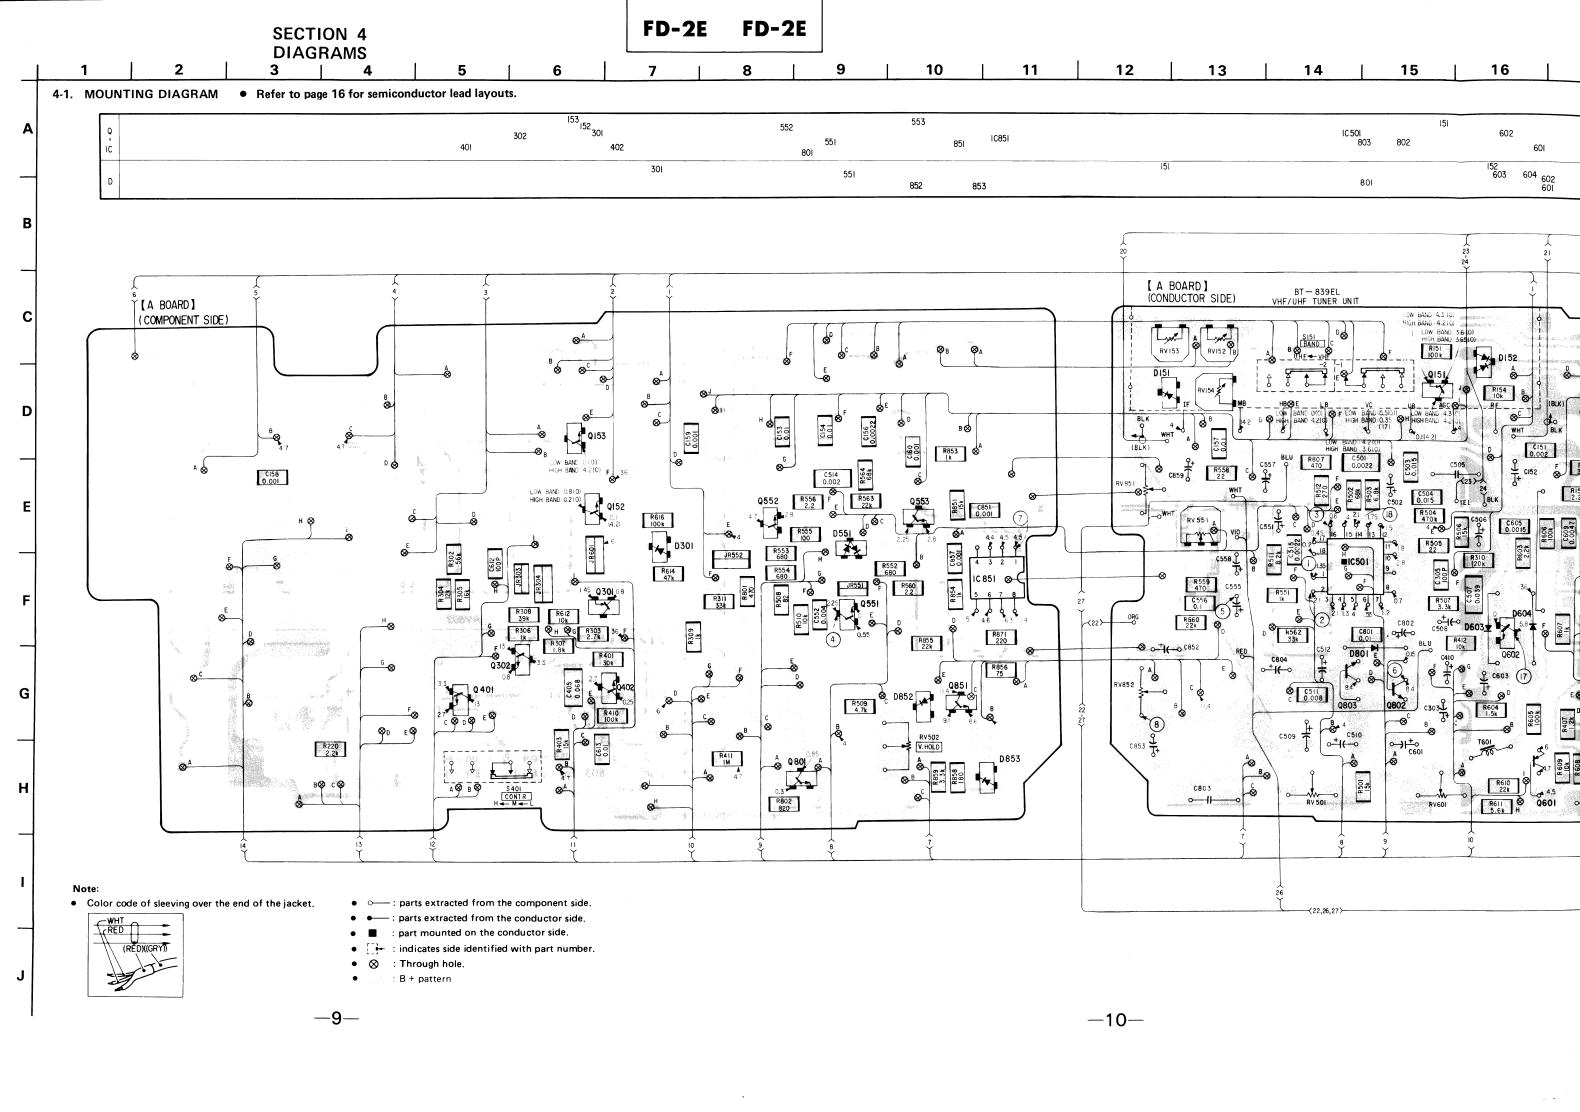

### Luminance (BRT) Adjustment

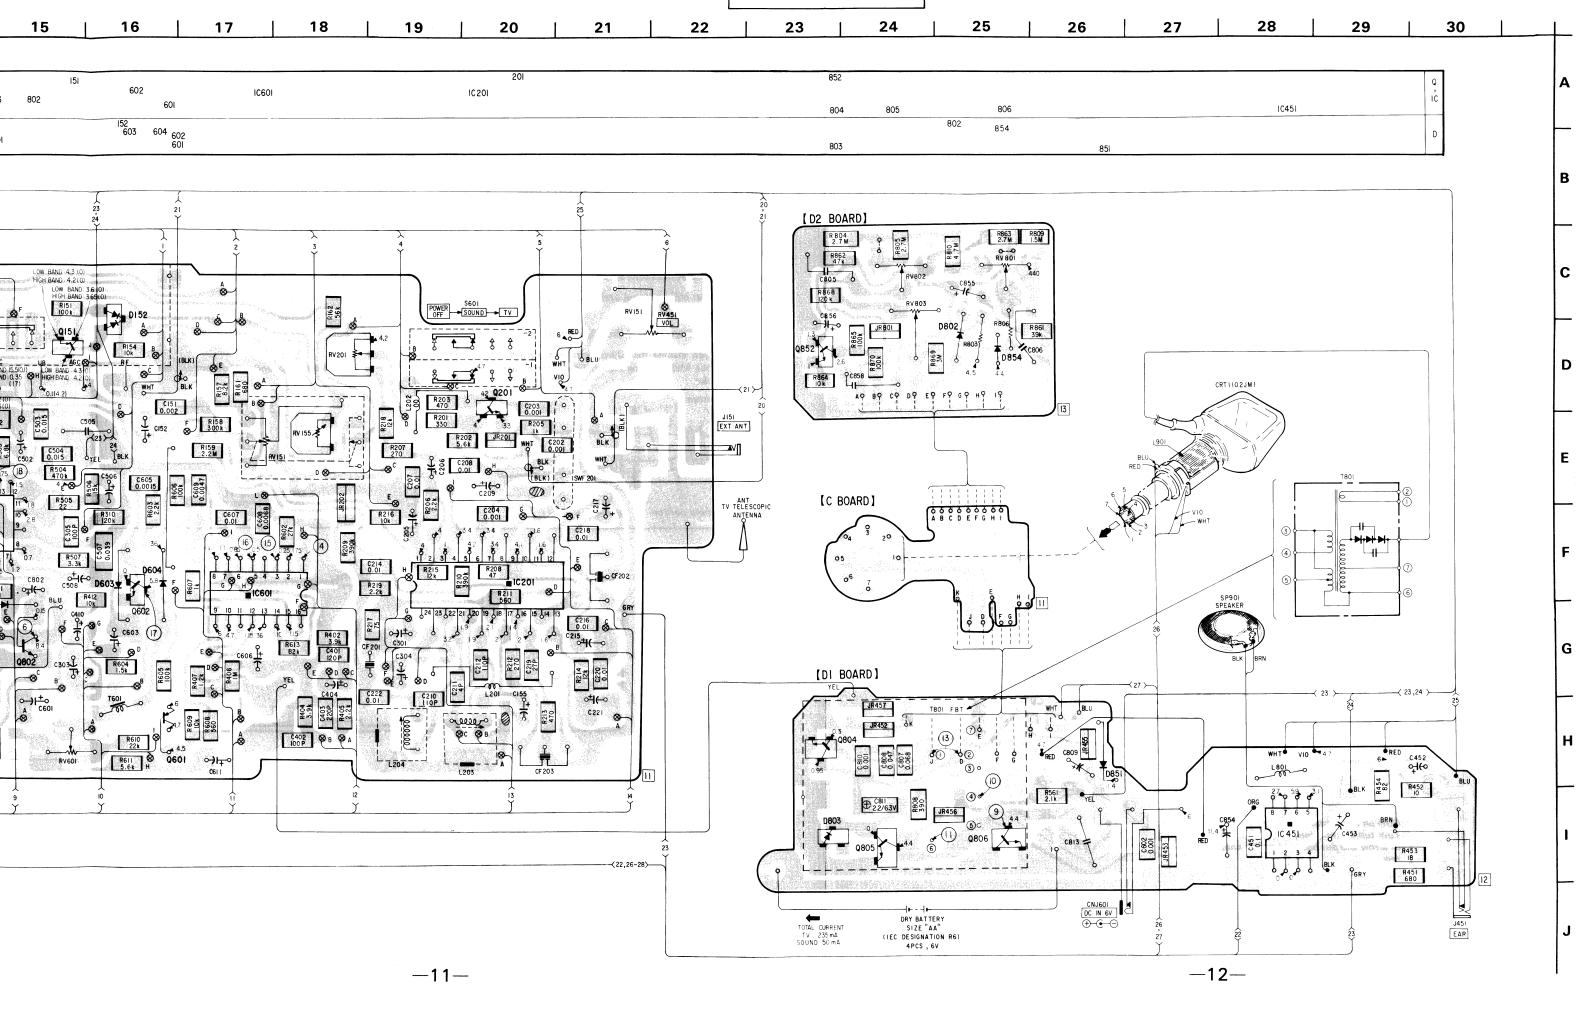

- 1. Set CONTR switch (S401) to "L" posi-
- 2. Bridge the pattern as shown at right according to the mark on the neck of the picture tube.
- 3. Turn BRT knob fully clockwise.
- 4. Connect a VTVM across R869 and adjust RV803 for 24.6V reading on VTVM.

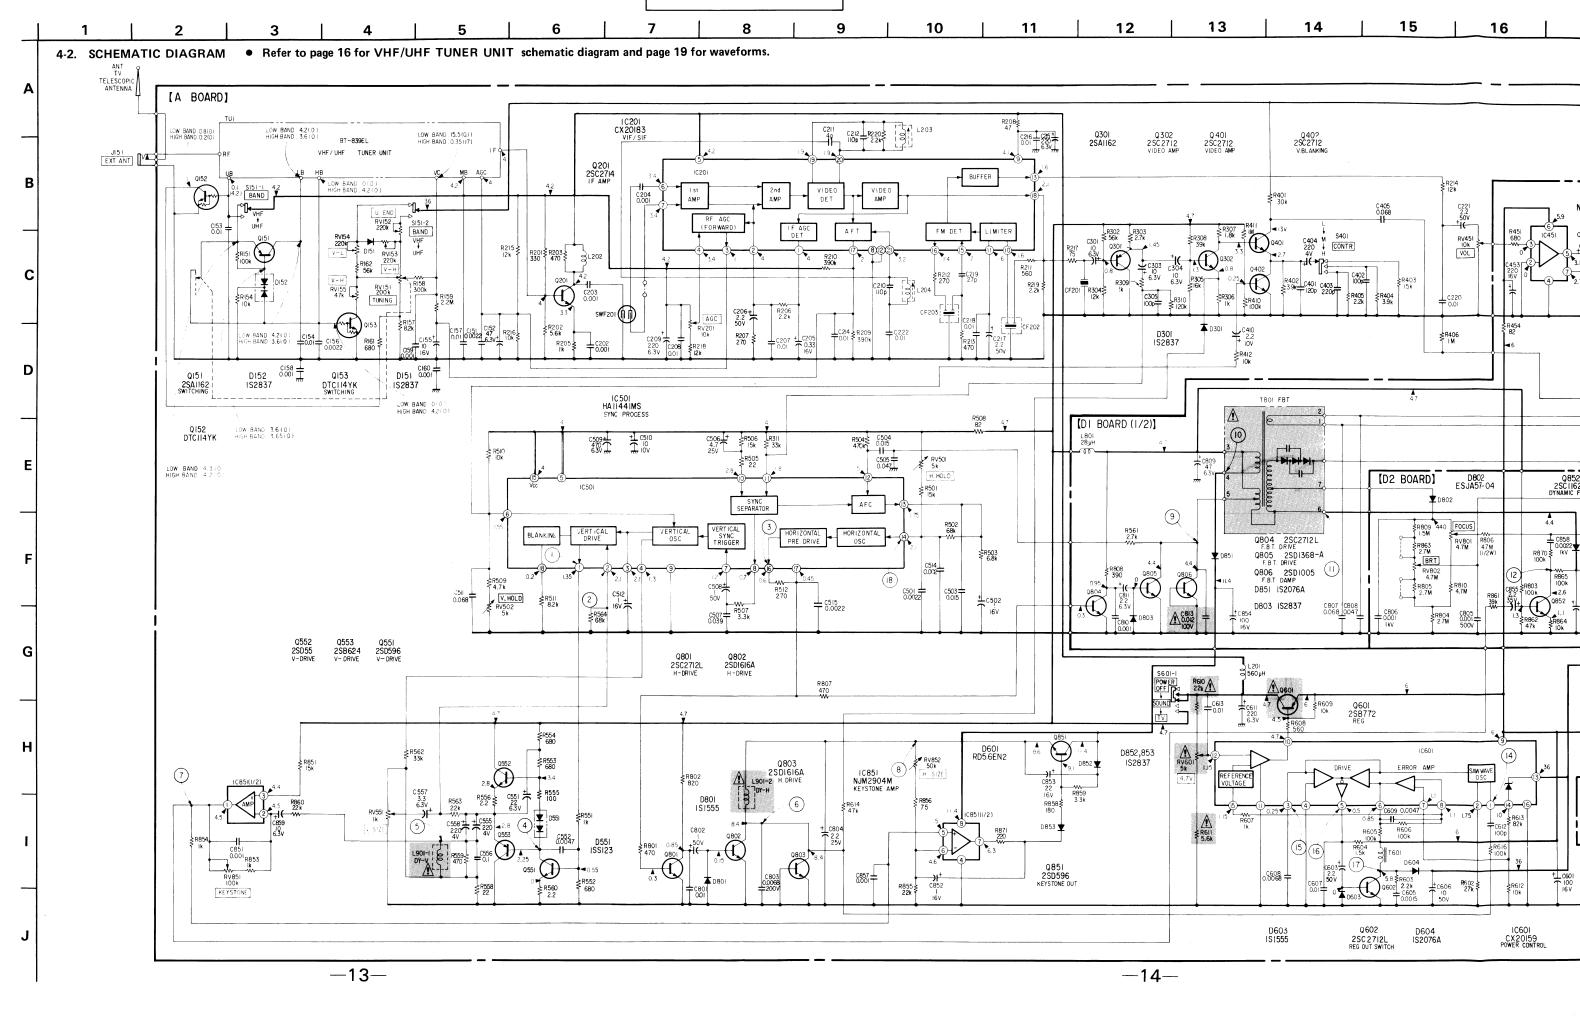

VTVM

-14-

### Note:

- All capacitors are in μF unless otherwise noted. pF: μμF 50 WV or less are not indicated except for electrolytics and tantalums.
- All resistors are in  $\Omega$  and 1/4 W or less unless otherwise specified
- Δ : internal component.
- : B + bus.
- adjustment for repair.
- Voltages are dc with respect to ground unless otherwise noted.
- Readings are taken under detuned conditions with a VOM (50  $k\Omega/V$ ). no mark: VHF
- ( ) : UHF
- Waveforms are taken under no-signal conditions by using oscillascope.
  - Voltage variations may be noted due to normal production tolerances.
- Switch

## **SECTION 6 ELECTRICAL PARTS LIST**

- Items marked " \* " are not stocked since they are seldom required for routine service. Some delay should be antici-pated when ordering these items.
- · If there are two or more same circuitsin a set such as a stereophonic machine, only typical circuit parts may be indicated and capacitors and resistors in other same circuits may be omitted.

CAPACITORS:

MF:μF, PF:μμF.

RESISTORS

· All resistors are in ohms. · F: nonflammable

· **MMH** : **mH** , **UH** : µН

SEMICONDUCTORS

In each case, U : μ, for example: UA...: μΑ..., UPA...: μΡΑ..., UPC...: μΡC, UPD...: μPD...

The components identified by shading and mark Aare critical for safety.
Replace only with part number specified.
